

App Being Reviewed: HowHighAmI

**Overall Comments** Cool concept, tested with messages and snapchat and both work as expected.

**Response to Dev Teams Wishes** N/A

**Usage Problems/Concerns** The pencil (edit?) button in the image fragment does nothing when pressed- I'm not sure if it isn't implemented yet or just does not work at all. When tested using snapchat, it sent as message through the app, not snapchat- I wasn't sure if this was the expected outcome.

**Bugs Found and How to Reproduce** Images are not saved in gallery when I reopen the app.

### Suggestions

1. Add a back button to get back to the gallery when viewing the image fragment
2. Save the images to the gallery after reopening the app
3. Add the ability to move where the altitude text is on the image
